```

The invention relates to a novel isolated 17 mer nucleic acid sequence, given in the specification, a sequence containing at least 15

given in the specification, a sequence containing at least extensions consecutive nucleotides from the 17 mer sequence, a sequence with, after optimal alignment, at least 80 % identity to the 17 mer sequence, a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       consecutive nucleocides from the 17 mear sequence, a sequence with, after optimal alignment, at least 80 % identity to the 17 mer sequence, a sequence that hybridizes to them under highly stringent conditions, or the complement of any of them, or the corresponding 8Ns. The novel conduction conduction and of them, or the corresponding 8Ns. The novel conduction of the invention are useful as probes and primers for detecting, identifying quantifying and/or amplifying a nucleic acid, conduction of recombinant polypeptides. Any of the nucleic acids, calls containing the nucleic acids, calls containing the production of recombinant polypeptides and primers (and for production of recombinant polypeptides and of the machine for the propagation of pharmaceuticals for prevention and/or treatment of viral containing the vector or antibodies directed against the polypeptides are useful for collic diseases that are characterised by development of tumours or cell containing the preparation of pharmaceuticals for prevention and/or treatment of viral containing the propagation, specifically cancer but also Alberiner's disease and complete is useful for dispassion of the 17 mer nucleic acids in containing the polypeptides can also be used to generate antibodies, and containing the nucleic acids described the polypeptides and antibodies are useful as components of protein of the propagation of t
New isolated nucleic acid, useful for treating viral diseases associated with tumors and cell degeneration, also related polypeptides, antibodies and transfected cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            schizophrenia; protein chip; gene therapy; tumour suppression; human fukutin; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cytostatic; virucide; neuroprotective; nootropic; neuroleptic; gene chip; antisense; sense; tumour; cell degeneration; cancer; Alzheimer's disease;

The invention relates to a novel isolated 17 mer nucleic acid sequence, given in the specification, a sequence containing at least 15 consecutive nucleotides from the 17 mer sequence, a sequence with, after optimal alignment, at least 80 % identity to the 17 mer sequence, a sequence that hybridizes to them under highly stringent conditions, or the complement of any of them, or the corresponding RNA. The novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      O'Crostaticy virucide; neuroprocective; nootropic; neurolaptic; gene chip; antisense; sense; tumour; cell degeneration; cener; Alzheiger e disease; schizophrenia; procein chip; gene therapy; tumour suppression; human fukutin; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8888888888888888888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ce isolated municic acids of the invention are useful as probes and primers of detecting, identifying, quantifying and/or emplifying a nucleic acid, e.g., as one component of a gine chip, in vitro as (antifying a cessente, and or production of recombinant polypepides. Any of the nucleic acids, cells, eventually the containing the nucleic acids, cells containing the vector or antibodies directed against the polypepides are useful for preparation of pharmaceuticals for prevention and/or treatment of viral cities are that are characterised by development of tunours or cell cases that are characterised by development of tunours or cell containing the containing the preparation, specifically cancer but also Alheimer's disease and cells of the propersion of the 17 mer nucleic acids in containing the subjumples is useful for disponsis and/or proposis of these chicages. The polypepides can also be used to generate antibodies, and could be appressed to the invention can be used in gene characterial subjumples in the containing the containing the containing the containing the subjumples is useful for disponsis and/or proposis of these chicages. The polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful as components of protein containing the polypepide and antibodies are useful for t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Best Local

The invention relates to a novel short interfering RNA (siRNA) nucleic acid molecule or an enzymatic nucleic acid molecule, that modulates expression of a nucleic acid molecule encoding HERZ, KRAS, HRAS, N-RAS, N-MMRA immunodeficiency virus (HIV) or a component of HIV. The nucleic human immunodeficiency virus (HIV) or a component of HIV. The nucleic

anti-rheumatic activity. The nucleic acid molecules are useful for reducing HER2, K-Ras, H-Ras, and HIV activity in a cell. The nucleic acid molecule of the invention has cytostatic, anti-HIV, and

                                                                                                                                                                                                                                                                  This invention describes novel oligonucleotide primers or peptide nucleic acid (PNN) oligoners for detacting single nucleicide primershams (SNP) and cyrosine methylation status in chemically pretracted genomic NN. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metholic disorders. The oligonars are also used for decentiar and metholic disorders. The nilponars are also used for decentiar and metholic disorders. Onligonars are also used for disorders and restanciar distorbation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and (PNA) oligomers for detecting single unclected polymorphisms (SNP) and cytopism embrylation status in chemically pretreated genomic DNA. The oligomuclectides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastroithestinal, respiratory, central nervous system, cardovescular and metabolic disorders The oligomers are also used for detecting cell type differentiation. BASCOROIC-ABSOSORY represent the oligomers described in the invention. NOTES, The sequence data for this patent did not form part of the printed specification, but was obstained in electronic format from WIPO at fig. wipo.int/pub/published_pot_sequences.
Oligonucleotide primer SEQ ID NO 280016 for detecting SNP TSC0008045
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Set of oligonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cytosine methylation status -

The oligonical politices are used for disposits and/or prognosts of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting coll type differentiation. The oligonucleotides are used for disposels and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, outdownscular and metabolic disorders The oligonors are also used for detecting cell type differentiation.

NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form part of the printed specification, but was obtained in electronic formatt from MIPD at
              This invention describes movel obigonuclocide primary or peptide and city (DNA) oligonary for detecting single and cattle polymorhisms (SNB) and cytosine derbylation status in chemically pretracts genomic DNA. The oligonary control of the control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     07-APR-2000; 2000DE-1019173
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SNP, single nucleotide polymorphism, human; diagnosis; PNA; cancer; CNS; peptide nucleotid codi; cytosine methylation; cardiovascular; primer; ss; central nervous system; gastrointessinal; respiratory; immune; metabolic central nervous system; gastrointessinal; respiratory;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Oligonucleotide primer SEQ ID NO 303141 for detecting SNP TSC0020339
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABI03168;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 12 BP; 3 A; 0 C; 3 G; 6 T; 0 other;

                                                                                                                                              This invention describes novel oligonucleotide primare or peptide nucleic scid (RNA) oligoners for detecting single nucleotide polymorphisms (SNB) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for disgnosis and/or proposels of cancers and a range of diseases including immune system, gastroinestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. The oligomucleotides are used for disgnosts and/or prognosts of cancer and a range of diseases including immume system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic discorders. The oligomers are also used for detecting cell type differentiation. AB200010-AB20031 represent the oligomers described in the invention. AB200010-AB20373 represent the oligomers described in the invention. MOVE: The sequence data for this patent did not form part of the printed specification, but was obtained in elsectronic format from HTD at

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleatide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of concer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metholic discorders The control of sorders are also used for detecting cell type differentiation.

METHOLOGIC ABSTROTT represent the oligomers described in the invention.

METHOLOGIC ABSTROTT represent this patent did not form part of the printed specification, but was obtained in electronic form part of the printed specification, but was obtained in electronic format from MIDO at ftp.wipo.int/pub/published\_pct\_sequences.

                                                                                                                                                                                                                                            This invention describes proval oliconvolectide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SNP) and cyrosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gentrolinestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. Baccontol-MECOSOS ABROROLO ABROSSOS, ABRORDA ABRORD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders: The oligomers are also used for detecting cell type differentiation. BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BECOMOIO-BEC
                                                                                                               ABIOO010-MB182073 represent the oligoners described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; SEQ ID 324862; 29pp + Sequence Listing; German
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             06-APR-2001; 2001WO-IB00713

                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes novel oligonucle-settde primers or peptide nuclei acid (PMA) oligoners for detacting single nucleatide polymorphisms (SNP) and cytosine methylation status in chemically pretracted genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastryognosis of respiratory, central nervous system, cardiovascular and metabolite sinal, respiratory, oligoners are also used for descenting and distormination.

Clusters are also used for descenting the differentiation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically practreated genomic DNA. The oligonucleotides are used for disposis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Oligomers are also used for detecting call type differentiation

Set of Oligonucleotides, useful for diagnosis and cell typing is designed to detect single nucleotide polymorphisms and cytosine methylation status

Claim 1; SEQ ID 354141; 29pp + Sequence Listing; German.

This invention describes movel oligomalectide primers or poptide nucleated acid (PNA) cligomary be detected a single nucleated by marriages (NA) and cytosise separate on setura a single allulations of the provided by the setup of the setup

                                                                                                                                                                                                                 This invention describes novel oligonuclocide primers or peptide nucleic acid (BNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or progness of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central mervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABIO0010-ABISO939 ABF00010-ABISO9399, ABF00010-ABISO9399 and ABIO0010-ABISO9373 represent the oligomers described in the invention. MOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at fit, wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at ftp.wipo.inr/pub/published_pet_sequences.

```
This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleicide polymorphisms (NPP) and cytopine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for disgonate and/or prognosis of concer and a range of diseases including immune system, gentral privous system, cardiovascollar and metabolic disorders. The central privous system, cardiovascollar and metabolic disorders. The central privous system, cardiovascollar and metabolic disorders. The central privous system, absolute and metabolic disorders. The account of the central privous system accounts are used to type discount system. Associate account the oligonates described in the invention.
                                                                                                                                                                         Sequence 12 BP; 6 A; 3 C; 0 G; 3 T; 0 other;
                                                                                                                                                                                                                                           NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID 372627; 29pp + Sequence Listing; German.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes novel oligonucleotide primare or peptide nuclei acid (DNA) oligonary for detecting single nucleatide polymorphisms (SND) and cyrosine methylation status in chemically pretroated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of causer and a range, of diseases including immune system, gestrointestinal, respiratory, central nervous system, outdownscular and metabolic disorders. The oligoners are also used for deserting call type differentiation.

This invention describes novel oligonucleotide primera or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (NNP) and cytosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastroinestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. ABC00010-ABC99989, ABC00100-ABC99989, ABC00010-ABC99989, ABC00100-ABC99989, ABC00100-ABC999989, ABC001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 1; SEQ ID 4181; 29pp + Sequence Listing; German
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Set of oligonucleotides,

Berlin

~

Set of oligomuclectides, useful for diagnosis and cell typing, designed to detect single nucleotide polymorphisms and cytosine methylation status . useful for diagnosis and cell typing, is

Claim 1; SEQ ID 4182; 29pp + Sequence Listing; German

This invention describes novel oligonucleotide primers or peptide nucleic

                                                                                         This invention describes novel oliconucleotide primary or peptide nucleic acid (DNA) oligomers for detacting single nucleatide polymorphisms (Na) and cytochine mathylation status in chamically pretracted gamma DNA. The oligomucleotides are used for disposes and/or progness of cancer and a central nervous system, outdoors, and the about of disposes. The central nervous system conditions and the about of disposes. The central nervous system conditions and the about of disposes. The coligomers are also used for detecting all metabolic disposes, and not considered the prince of the progness of the coligomers described in the arvention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             acid (PNA) oligomors for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated geomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, contral nervous system, cardiovascular and metabolic disorders. The oligomore are also used for desecting only type differentiation. Accordio, Ascoppig, Asprodul-Asprojey, ABHOOUL-ABPOSIGN, ABHOOUL-ABPOSIGN, ABHOOUL-ABPOSIGN, ABHOOUL-ABPOSIGN.

This invention describes novel objounce ordered primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (NMP) and cycosine methylation status in chemically pretracted genomic DNA. The oligomers for described and/or prognosis of concer and a range of diseases including immune system, gestrointestinal, respiratory, comittal nervous system, cardiovasceniar and metabolic disorders: The oligomers are also used for describing call type differentiation.

The oligonuclectides are used for disgonis and/or prognosis of concer and range of diseases including immune system, gastrointestinal, respiratory, central nervous system, outdiovascular and metabolic disporters. The package are also used for decenting and metabolic disporters. The package are also used for decenting all type diffeomitation.

MOTE THE sequence data for this patent did not form part of the princed specification, but was obtained in electronic fromat from thy at princed specification, but was obtained in electronic fromat from throw thy at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Set of oligonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cytosine methylation status -

The oligonucleotides are used for disposis and/or proposite of cancer and a superior cancer and a superior cancer and a superior cancer and as a superior cancer and metabolic disporters. The adjourners area as used for detectina and metabolic disporters. The ACOMOID-ABROSSON ABROMOID-ABROSSON ABROMOID-ABROSSON appreciate the oligoners described in the invention. MOZE The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from NITO at

This invention describes novel oligonucleotide primers or peptide muclatic acid (PNA) oligonors for detecting single nucleotide polymorphisms (SNP) and cycosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosts and/or prognosts of camoer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, acativate and metabolic discorders. The
                                                                                                                                                                                                                                                                       were or originate offices, useful for diagnosis and cell typing, is designed to detect single nuclectide polymorphisms and cytosine methylation status
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel oligonuclectide primers or peptide nucleic acid (PNN) oligoners for detecting single nuclectide plymorphisms (SNP) and cyrotize methylation status in chemically pretreated genomic NN. The oligonuclectides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, pastroinvestini, respiratory, central nervous system, conditionate and metholic disorders. The oligoners are also used for describing call type differentiation.

1014cmers are also used for describing the type differentiation.

1014cmers are also used for describing the pastroin of the invention.

1014cmers are also used for described in the invention.

1014cmers are also used for described in the invention.

1015cm are sequence data four this patent did not form part of the printed specification, but the state of the printed specification.
                                                                                                                                                                                                                     Claim 1; SEQ ID 67110; 29pp + Sequence Listing; German

                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligomers for detecting single nucleotide polymorphisms (SNP) and cyrosaine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       oligomers are also used for detecting cell type differentiation.

                                                                                                                                                                                                                                This invention describes novel oligonuclectide primers or peptide unpleid acid (PNN) oligoners for detecting single molectide polymorphisms (SNP) and cyrosine methylation status in chemically pretroated genomic DNA. The oligonuclectides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metholic disorders. The poligoners are also used for detecting call type differentiation.

10 ilgonors are also used for detecting call type differentiation.

11 used to the control of the control of the invention.

12 used to detect the oligoners described in the invention.

13 used to detect the oligoners described in the invention.

14 used to detect the prince of the prince of peculiarion, but was obtained in electronic format from BITO at

This invention describes novel oligomucleotide primers or peptide nucleic acid (PNN) oligomust for detecting single nucleotide polymorphisms (SNP) and cytosine methylation efeatus in chemically pretreated genomic DNN. The oligomucleotides are used for disposes and/or prosposis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, acidiovascular and metholic disorders. The oligomers are also used for detecting call type differentiation. According to the primer of the pri

EPIGENOMICS AG

were or cargonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cyrosine methylation status -WPI; 2001-657177/75 Olek A, Piepenbrock C, Berlin 7

Claim 1; SEQ ID 110674; 29pp + Sequence Listing; German

This invention describes novel oligonucleotide primers or peptide nucleic acid (BNA) oligoners for detecting sincle nucleotide polymorphisms (SND) and cytodine mathylation status in chemically pretrated genomic BNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gentrolicastinal, respiratory, oligonary areals used on cardiovestinal and metabolic disorders. The oligonary area as used for decenting cell type differentiation. Different area also used for decenting cell type differentiation. National-MBS9999, ABF00010-MBS9999 and national mathematical disorders described in the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from NITO at

The oligonucleotides are used for disgnosis and/or progness of cancer and a range of diseases including immune system, gestrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. ABJ00010-ABJ00037 spresent the oligoners described in the invention. MOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at the view of the printed specification, but was obtained in electronic format from WIPO at the view of the printed specification, but was obtained in electronic format from WIPO at the view of the printed specification, but was obtained in electronic format from WIPO at the view of the printed specification, but was obtained in electronic format from WIPO at the view of view 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SNP, single nucleotide polymorphism; human; diagnosis; PNA, cancer; CNS, peptide nucleotide catid; cytosine methylation; cardiovascular; primer; SNS, peptide nucleot actid; cytosine methylation; cardiovascular; primer; SNS, peptide nucleotide actid; cytosine methylation; cardiovascular; primer; SNS, peptide nucleotide nucleotide

Oligonucleotide SEQ ID NO 116572 for detecting SNP TSC0029176.

SNP, single nucleotide polymorphism; human; diagnosis; PNA; cancer; CNS; peptide nucleic acid; cytosine methylation; cardiovascular; primer; 68; central nervous system; gastroincestinal; respiratory; immune; metabolic.

06-APR-2001; 2001WO-IB00713

designed to detect single nucleotide polymorphisms and cytosine Set of oligonucleotides, useful for diagnosis and cell typing,

Claim 1; SEQ ID 116572; 29pp + Sequence Listing; German

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SNP) and cytosine mathylation status in chemically pretrasted genomic DNA. The oligonucleotides are used for disponsic and/or prognosis of cancer and a range of disposes including immune system, gestrointestinal, respiratory, central nervous system, cardiovascula and metabolic disportes. The oligoners are also used for describing call type differentiation.

The oligonuclectides are used for diagnosis and/or prognosis of cameer and a range of diseases including immune system, gestrointestinal, respiratory, central hervous system, cardiovascular and metabolic disorders. The oligonars are also used for detecting cell type differentiation. ABCTOROIL-RESPSSS ABMOOIL-RESPSSS ABMOOIL-RESPSS

This invention describes novel oligonuclaoride primers or peptide nuclatic acid (BNA) oligoners for detecting single nucleatide polymorphisms (SNP) and cyrosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for disgnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligoners are also used for detecting cell type differentiation. ABC00010-ABC09101 represent the oligoners described in the invention. MOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from MIPO at fip. wipo.int/pub/published\_pot\_sequences.

methylation status Set of oligonucleotides, useful for diagnosis and cell typing, designed to detect single nucleotide polymorphisms and cytosine WPI; 2001-657177/75

Claim 1; SEQ ID 155393; 29pp + Sequence Listing; German.

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SNB) and cytosine methylation status in chemically pretreated genomic DNA. The

The oligonucleotides are used for disposs and/or progness of concert and a range of diseases including immune system, gustrollessinal, respiratory, central nervous system, actionable disorders. The central nervous system actionable disorders. The oligonary are also used for detecting halfoul metabolic disorders. The oligonucleotides are used for disponsis and/or prognosis of camers and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABIO0010-ABIG9939 ABF00010-ABE99399, ABF00010-ABE99399 and ABIO0010-ABIG9939 represent the oligomers described in the invention. ANTE: The sequence data for this patent did not form part of the printed specification, but was obtained in elactronic format from MIPO at ftp. wipo.inr/pub/published_pot_sequences.
This invention describes novel oligonucleotide primers or peptide muclaic acid (PNN) oligomers for detecting single nuclacide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNN. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gentrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The coligomers are also used for detecting cell type differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Olek A,

                                                                                                                                                                                                                                                         This invention describes povel oligonomic portide primary or peptide muchaic acid (PNA) oligoners for descriting single nucleated polynomythisms (RNP) and cytosine mathylation status in chemically pretraited genomic DNA. The oligonomic pot describes are used for diagnosis and/or prognosis of cancer and a concertant in the primary of the prognosis of cancer and a contraint pretraint of the primary of the prognosis of cancer and contraints are also used for describing cell type differentiation.

ABJ00010-ABJ09999, ABB00010-ABP9999, ABH0010-ABB99999 and the intention.

MAJ0011-BB10011 represent the oligoners described in the invention.

MAJ0011-BB10011 represent the oligoners described in the printed specification, but was obtained in electronic format from WIDO at present period of the printed specification, but was obtained in electronic format from WIDO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABI00010-ABI82073 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from MIPO at ftp.wipo.int/pub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ure un origonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cytosine methylation status

oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gastrointestinal, respiratory, central nervous system, cardiovascular and metabolic disorders. The oligomers are also used for detecting cell type differentiation. ABC00010+DE09999, DE0001-DE09999, ABE0001-DE09999, ABE0001-DE099999, ABE0001-DE09999, ABE0001-DE0999 This invention describes novel oligonucleotide primers or peptide nucleotic acid (PNA) oligoners for detecting single nucleotide polymorphisms (SNP) and cytosine methylation status in chemically pretreated genomic DNA. The ftp.wipo.int/pub/published\_pct\_sequences. Claim 1; SEQ ID 257748; 29pp + Sequence Listing; German.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes novel oligonucleotide primers or peptide uncleic acid (PRA) oligoners for detecting single nucleotide polymorphisms (SNP) and cytosize methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for dispones and/or prognosis of cancer and analyse of diseases including immune system, gastrointestinal, respiratory, central nervous system, cadiovascoliar and metabolic disorders The Oligoners are also used for detecting cell type differentiation.

Claim 1; SEQ ID 261327; 29pp + Sequence Listing; German.

Set of oligonucleotides, useful for diagnosis and cell typing, is designed to detect single nucleotide polymorphisms and cytosine methylation status

WPI; 2001-657177/75

radge of diseases including immune system, gastrointestinal, respiratory, contral nervous system, cardiovascular and metabolic disorders. The oligomers are also used for desecting cell type differentiation. ABC00010-ABC99399, ABC00010-ABE99399, ABC00010-ABE993999 and ABI00010-ABI3073 represent the oligomers described in the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIFO at ftp.wipo.int/pub/published\_pot\_sequences. This invention describes novel oligonucleotide primers or peptide nucleic and (PNA) oligomers for detecting single nucleotide polymorphisms and oligoners for detecting single nucleotide polymorphisms (PNA) and overside methylation septus in chemically prestracted genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a

                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes movel oligonucleotide primars or peptide nucleic acid (PRN) oligoners for detecting single nucleated polymorphisms (SNP) and cyrosine methylation status in chemically pretracted genomic DNN. The oligonucleotides are used for diagnosis and/or prognosis of causer and examps of diseases including immune system, gestrointestinal, respiratory, central nervous system, condiovasconiar and metabolic disportes. The oligoners are also used for detecting cell type differentiation. Units of the disposition o

This invention describes novel oligonucleoride primers or peptide nucleic acid (PNA) oligoners for detecting single nucleicide polymorphisms (SNP) and cycosine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of cancer and a range of diseases including immune system, gestrointestial, respiratory, central nervous system, cardiovascular and metabolic disorders. The

This invention describes novel oligonucleotide primers or peptide nucleic acid (PNA) oligoners for detecting single nucleated polymorphisms (SNP) and cycopine methylation status in chemically pretreated genomic DNA. The oligonucleotides are used for diagnosis and/or prognosis of camer and a cligonucleotides are used for diagnosis and/or prognosis of camer and a

range of diseases including immune system, gastrointestinal, respiratory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    888888888
        The invention relates to a method of identifying gene transcripts, which involves generating at least a first set of raw sequences which years a least a first set of raw sequences (its by sequencing at least a first type of biological material, isolating first ditags (IT) from RD, isolating first case (IT) from DT, determining the abundance of T1 and identifying IT, and then reducing the amount of sequencing errors using a statistical model for sequencing errors to be captient of UT. The method is useful for the identification of gene transcripts such as RNA or their corresponding cDNAs, and also for conclecting information from several cell types, e.g. with reference to DGE (differential gene expression) studies. The method has improved collecting information from several cell types, e.g. with reference to DGE (differential gene expression) studies. The method has improved of C collecting information from several cell types, e.g. with reference to DGE (differential gene expression) studies. The method has improved of C collecting the terror trace and consequently rejecting CC dangerous tags. It provides an easy way for consulting the identified tags by use of an improved graphical interface. Sequencing error is creduced by applying a statistical model. A measure of confirm the CC identification is provided, by allowing the user to confirm the method provides confirm the confirmation shown interfaces from which is richer than other interfaces from smaller of confirmation above iterateful at the method provides confirmation above iterateful at the method provides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
